Repair and represent Practical drive-on ramps by Rameder

A car should always stay grounded when in motion. However, a slightly elevated vehicle position can be desirable in the workshop or showroom for repairs or presentation purposes. The cost-effective drive-on ramp by **Rameder** demonstrates that raising a vehicle does not necessarily require a hydraulic lift or rotating platform. The **Rameder** drive-on ramp is well-suited for professional and hobby mechanics as well as for car salespersons and available for EUR 28.99 at www.rameder.eu. The dimensions of the ramp are 83x30 cm.

The tire stand is at a height of 21 cm and offers sufficient space for repairs on the underbody. Vehicles that are elevated at an exhibition stand out and provide a dynamic perspective. **Rameder** recommends always using two ramps simultaneously whereby the combined load-bearing strength is 2,000 kilogrammes. Even heavy sport utility vehicles can be "jacked up" perfectly since only one vehicle axle is raised at a time.
